

# Control & Comply Solutions Summary

Security threats and compliance requirements put huge demands on the network team, below is a summary of what Full Control Networks can offer to help you retain control and comply.

Worried about users clicking links and opening attachments that could be malicious? Then consider Bromium. Seamless to the end user, Bromium's unique technology isolates these tasks from each other, from their PC and more importantly isolates them from your network.

In front of your firewall, ThreatARMOR filters out unwanted "bad" traffic by known malicious IP or by blocking countries, saving your firewall resources for the traffic it really needs to be looking at.

Solutions to monitor your network in real time identifying all connecting devices and continuously evaluating them for threats or unknown connections, without the use of agents. Automated ability to grant or block access or move the device to a quarantine VLAN.

Next Generation Firewalls hosting security features such as web filtering, application analysis, VPN connections on top of standard firewall tasks.

It was reported recently that 62% of cyber-attacks are breaches in privileged accounts (admin or power users) with shared credentials. We all intend on protecting these passwords and changing them regularly. With added pressure from regulations such as PCI, ISO & GDPR enforcing compliance, it's another area that needs some control. Thycotic's Secret Server offers an affordable, easy to use & quick to install solution.

SIEM.  
But different.

The logs of the Firewalls, Routers and Servers might be telling you something really important, but also might be a waste of time. Compliance is a big driver to keep these logs and have procedures for dealing with events, but these can mount into hundreds or thousands of messages every day. LogPoint is a log management solution designed to capture and summarize all logs in a series of easy to digest dashboards.
